The latest Premier Pro, CS6 or whatever you want to call it, is still limited to the Mac platform, and of course, comes with the same limitation. Of course, that is the least of our worries. A similar set of features is available to create Adobe Cue Sheet files, including the smart selection tool and edited artwork. Both apps include a new co-editing feature that we're calling Shared Project Mode allowing you to co-author projects together in a new interface. And you can co-author completely different projects, creating a large portfolio that you can switch back and forth between. You can also share directly in portfolios. The design team also created an updated Creative Cloud Libraries application featuring scannable labels, which allows you to easily switch back and forth between your libraries on the tablet and desktop as needed. And you can manually sync your library to other platforms supporting Creative Cloud Libraries for an easy way to keep different members of your design team working on projects at the same time from different devices.
