Even if you're using a free version of Windows 10, the version you choose will determine if you can access your Microsoft account, the same way you can with your personal computer running Windows. Microsoft is clearly dedicated to upgrading Windows 10 to make it more helpful, and it knows this software will increase in popularity among consumers and businesses. The key is ease of use; it's an advantage to have a Windows 10 Pro edition. The free version of Windows 10 is not accessible to all devices, although you can still log in to your account and Microsoft's cloud service (with some restrictions). Microsoft is consistently striving to improve Windows 10 and it will be great when it ends up on computers that are already available and just need to be updated. The Intel Pentium G3150 is the CPU of choice for Windows 7, and it is a quad-core processor that has a speed of 2.1 GHz. The Intel Pentium G3250 is the processor of choice for Windows 10, and it is also a quad-core processor that has a speed of 2.2 GHz. You will have no problem doing basic tasks on both operating systems, but if you're trying to install Windows 7 on a laptop with a lower-class CPU, you might have a problem. On the hardware front, the software often determines how well a computer runs, not the other way around.
