As someone who spends most of the day using a computer, I was not excited to learn that Photoshop's long-term solution is to use "AI" (Artificial Intelligence) editing. The AI editor is only a first step that will definitely improve in the near future, using the "Creative Cloud Solution" which will allow for more creative manipulation of images. Adobe isn't just making enhancements for Elements, which helps bring it up to speed. Elements and the company's other offerings get updates as well - from intuitive, intuitive Elements, Lightroom, the new Creative Cloud and, of course, Photoshop itself. Adobe's software has always been the gold standard for editing photos and doing other digital manipulations. But over the last few years, the company has been adding new ways to interact with your work—and the Experience panel, which is still at the bottom of the interface, has been sped up so you now get a crisper preview. At the risk of repeating myself, I'll give a thumbs up to previous updates—the versioning is now in a dropdown menu so it's easy to stay up to date. The new UI for more complicated tasks is elegant (more in the video than on the page), and the Performance section gives you an idea of what your computer is doing behind-the-scenes. Creative Cloud subscribers get access to major new features like Content-Aware Fill in Photoshop and Liquify, but I prefer to use them in Lightroom—and once you install Lightroom, you get access to Photoshop-friendly plugins such as Healing Brush, Mirror, and Clone Stamp.
