This is a fantastic app. I've never had to pay for an app that makes editing so fast and easy. I've been working on some more complex projects lately and this app really shines. I made some adjustments to the colors in a second and was pleased with the results. It's pretty easy to use and it has some customization options. I would give this one a 5 star rating and recommend it for anyone who edits photos or develops photos. I think you can make a lot of some photos better. But on the other side you could show a little adjustment not perfect, because photos as pictures is great, and if you do a picture perfect you see a little reduced negative effects. But if you can make the things more as first try, then I would suggest you have this one. Awesome app, made it from a client's photo right away and he was super happy with it. If you're using an iPhone or iPad for photo-editing you need to download this app. I, for one, have dreams of being able to do Excel-like spread sheets on my tablets and this app is the closest I've found on the App Store. Too bad Photoshop Elements is rubbish and would never use any version of it. I love this app. It's all on-screen and on the tablet, so even when I'm away from home I can still do house from anywhere that has a wi-fi connection. I've used this app on both iPads and iPads Pro. Would definitely recommend it I use Photoshop on the desktop, but for some reason I ended up downloading this app. Although it is pricey, I had some free time, so I thought this would be a good way to get the hang of it without spending a ton of money. I absolutely LOVE IT. I can edit pretty much every type of photo. No matter how complicated the job is, I can figure it out. The workflow is simple too. I just get a new document and start editing. It happens so fast, and when I'm done I have a new image that looks amazing. I don't even need to export it to complete.
