I understand the review is done on a PC using LR 4.4.
But I am using LR 5.6 Preview on a Mac Pro (and I'm going to be looking at getting Photoshop CC once the update Lags are done).
My files are imported from a SD card. Even with LRs (or al, any) Silver ePrint support, I would like to get rid of TIFFs.
Performance seems much better with LR 5.6. It seems like the Darkroom tools make it much easier to get more accuracy with mimicographs and better color adjustments in my images.
- for instance, I can easily just rate the exposure or color balance first, then go back into LR and make the necessary adjustments.
- I can do some tweaking on a screen in the Darkroom, then pull it up in LR and see the results more easily.
- but I find I'm constantly redrawing.
- the new color space adjustments in Darkroom are great, but they get pushed out of Darkroom when I open them. In the Darkroom I can play with them easily, but then I want to release them back into the file with the main adjustments. Then I have to relaunch Darkroom so it can stay in sync.
- I'm not sure if I'm missing something or not, but when I go back into LR after closing my image, I do not see the changes were to have made here in LR.
- I'm not sure if adjustments I made in Darkroom are making it into LR. I never seem to find them. I usually do this under 'Color', where I find something that I think is too bright or too dark, then adjust that. I'm not sure if it is appearing in the intended areas.

- I have found that the White Balance in Darkroom fixes itself, so I can see if problems there, and correct there.

The title was intentionally vague to ensure that anyone sitting in the audience would benefit from it. My intention was to equip anyone with the basic skills to use Keynote to create a professional presentation that they can at ease use for their own work. Keynote works extremely well for presentations, whether that is for a company sale, an internal meeting to discuss the current business situation, or even to explain to your boss why the company deserves to bid for that contract. It doesn't really matter the material you are curating in Keynote. Whether it's a new product, why you are the best choice for the job, or a detailed report on the competitors, you can create it all in Keynote. Best of all, it is free! So, for anyone who is thinking of getting into Keynote, I would love to hear what you already know about creating a successful presentation in Keynote. New

verison 2.3 is just one of the many updates to this awesome collaborative tool we have all come to know, love and hate from Slack's many, huge updates in the past. Slack, the conversation collaboration platform – Cisco makes it easier to communicate, share information, and collaborate. We've all been on the same platform for a while now. At Cisco, we have been using Slack internally for almost two years. With the help of Slack, we can invite people to our meetings, interact using the channel and share knowledge in a more efficient way. What's new in version 2.3? The not-so-big changes to Slack 2.3, majorly focuses on addressing user difficulties in the new adoption process for corporate users with more robust capabilities in improving team directory searches, better use cases for file sharing and file sharing in public channels, volume metrics for private channels, and a number of improvements to the team directory search functionality. New user adoption The biggest change is the addition of a new user flow enabling you to seamlessly invite a user from your CRM database and have them join Slack as part of their social media integration. You can invite them to your channel and files become available on Slack. The other improvement we've got in this version addresses a user's event invitation process. This allows users to now create new channels with invite-only, rather than having to first create a new team from scratch. Benefits With the use of Slack, you can have a "second life" when it comes to the online collaborative interaction between your team members, your customers, and other users. Corporate adoption With new capabilities such as file sharing, channel sales, directory search improvements, and user authenticity verification. This ensures that your company is timely meeting compliance requirements and reduces the risk of any privacy issues. Great benefits for your company Slack is the perfect Team Collaboration software for businesses large and small, as it helps improve the effectiveness of your team functioning and productivity.
