Photoshop for 2020 is a fantastic post-workflow for creative professionals. It has everything you need to be productive as a photographer or artist, but also the power to truly make images sing. This is both amazing and intimidating: you can be as creative and expressive as possible, but you're also responsible for staying out of trouble. That's not to say that Photoshop is incapable or does not boast incredible power, of course—it is, after all, the most widely used photo editing tool in the world. But the real power of a piece of software like Photoshop is in the shared experiences entrepreneurs and creative professionals have when they work together to create and share content. Twenty years of transforming images is an impressive achievement, but more impressive are a collection of passionate creators using it to reinvent their businesses, discover new perspectives, and bring their work to the world. Additional new technologies, services and products unveiled at the Adobe MAX 2019 event include:

- An update to Lightroom, with expanded video editing support;

- Conductive materials discovered in NASA's human experiment to determine if astronauts can handle long-term exposure to zero gravity.

Given that Photoshop is an Internet-only application, the company plans to focus its future development efforts on a web-based version. The Version 2023 release of Elements includes a Google Chrome-powered web browser that introduces new features, including video editing and editing tools. Users can browse and select images, share the contents of a file, and use the tools to improve the image quality, including more powerful Fill and Sharpen tools, as well as the new One-Click Fix tool to remove and replace objects in images with a single action.
