SphinxSDToolsPortable is a Java application that enables to build models in a convenient way. It is also able to simulate the model and produce a summary report. A flexible model can be constructed by the user and it can be supplemented by the use of modules. The software is already designed to enable the user to simulate the model. However, there is a large variety of commands that can be used. There are also a number of parameters that can be defined by the user for the model. Furthermore, it is possible to add modules to the model as well. These modules are also designed in a way that allows the user to add them easily. • To run the application you need to download and install Java Runtime Environment (JRE) and other optional programs. • Note that this is not a simulation application. • The computer on which the model is to be built needs to be connected to the Internet. • To get more information about the features and usage, please see the website www.sphinx.biz.
