The Smart Sharpen feature works fairly well, producing high-quality results with some slight overprocessed edges. When applied in a large area, the edges can appear blurry. Bob Brown once mentioned that zooming in (or moving a control panel to a postage-stamp size) will help immensely with the oversharpener. Whether you're going too big or too small, choose where to apply Smart Sharpen, then it's there to handle the rest. It's also fun to watch. You can auto-adjust an image with Smart Sharpen enabled, letting you know what results it produced. Smart Fill is a great new tool to replace cloning. Using patterns, Smart Fill evens out shadows automatically and adjusts for illumination. This is one of the more difficult features to master, so most people have to experiment with it to see if they can get results they like. The Overlay labeling functionality is available on both the PSD and the image in the Layers panel. You can label the image, PSD or layer, whether it's currently selected, or cycle through all layers in the file. Use the handy shortcut key, "CommandL" on the Mac to toggle between the various labeling options. You can switch between color and grayscale labeling by selecting the color option from the drop-down menu. Real-time commenting works on either a selected or an all-layer view. You can switch views while adding comments. Once comments are made, you can toggle between viewing them on either the image or the file. Photos, layers and drawings can be assigned comments. You can view your comments or comments made by other users in the file, in the History panel, in a preview panel, and by accessing the comment through the Review Panel.

Select an object, and apply a new effect to it, letting us know what you like and letting us help. A few months ago, we asked our users, "what is Photoshop?" One user, [@veganholme](#), said, "It is how you look for the perfect photo and then use Photoshop to make it look like nothing." That's exactly how you'd use Photoshop, and that's why we built the application that people love today — the way you might use Photoshop on your computer. e3d0a04c9c

With Share for Review, customers can bring other team members into Photoshop as collaborators, and immediately share documents, share editing data, and work together through direct collaboration. Using the Share for Review, user experience is seamless, and team members can share their work and actively collaborate on it with a simple click. When users open a Share for Review from Photoshop Express, they continue working in the application on their machine, but they are also immediately sent to Photoshop on the other person's machine for review. The feature also works well when two people share a fully-immersive canvas experience with a 360-degree web link in Photoshop or Elements. Share for Review - powered by Quip - can be activated via email or through the online sharing workflow tools. Share for Review enables customers to collaborate at the highest level across teams and devices with ease. With the new search features for photos in Photoshop, customers can search and quickly find photos in your photo library. This will be particularly useful to customers creating a project with large quantities of images. Currently, searching photos is a two-step process. First, customers need to set up an expression for a common object or pattern. Images found using that expression are then sorted by relevance. Finally, customers can manage collections of images to compare quickly by finding similar photos in a different collection.
