So if your Mac or PC isn't quite powerful enough to run Photoshop, or if you simply want to save on real estate and need a smaller editing app on your iPad, there's the Adobe Photoshop Sharpener app for iPad apps. The previous version saw the rollout of the third major revision of the Photoshop CC application since Adobe Photoshop 7. The much anticipated "Photoshop CC for iPad" was announced on October 19, 2014. Photoshop CC is available to iOS users in two flavors: Photoshop CC Photoshop Sketch. The major difference between the two is that Photoshop Sketch is a cloud service that does hard copy/scanning, while Photoshop CC is the full digital imaging application. Photoshop CC has recently been officially tested for iOS devices, and an official release of the application is now available on Apple's App Store. The new version supports both iPad and iPhone, and the new version has changes under the covers, but the app still feels and looks great. Scans taken with the app are automatically saved into both your library and the cloud. The library leaves you with a greyed-out "Add to Lightroom" button. If you choose to keep the scan, the computer's local hard drive will be used to store the image. If you choose to have the image in your library, then the image will be sent to the cloud – unless you override the default behavior of Adobe Lightroom. You can then choose what to do with the file once Lightroom is open. In seconds you can make a duplicate of the image, or if you want to make the original again in the library, you can just drag the image into your library.

It's a simple workflow, but the workflow benefited from the removal of other problems in the previous version.
