In the past, one could argue my approach is a little bit "negative." Looking at the market this way, it is entirely appropriate. Many times, the only way to obtain an honest review of a particular product is to test it in an environment where the vendor is competing with the same product. That is one reason why I have been testing Apple iPads in a side-by-side environment against competing products like the Canon EOS M. For example, I was not at all impressed with the SIM-free iPhone 8 until I tested it in a side-by-side environment with the iPhone 8 Plus and Samsung Galaxy Note 8. The consequences of this are twofold. First, some of the most extensive street testing I do takes place in side-by-side environments. So any statistic that compares the iPhone 8 to rivals like the iPhone 8 Plus is certainly flawed, which makes it difficult to accurately compare apples to oranges. Second, my reviews are not reviews of products. Instead, I concentrate on software that automates, enhances, or supersizes tasks so you can get more of your value for digital photography. Products that let me peel away one imaging part after another, providing more options and control over my photo editing tools, are evaluated under "Developer" mode. When I am in "Lib. mode," I put the product in its intended role. The rest of the metadata application updates for Lightroom 5.0 include a new Raw Converter with support for Exif 2000 and World Image Format (WFX) on Windows. Apart from Raw Converter and an improved lane label script, most of the Visible Metadata update is just a rewrite, but I do feel improvement in Lightroom 5 (with regards to user experience) compared to Lightroom 4.2 is noticeable. Example: when you perform the actions on a selected image, the original image is updated with a new "Created on" or "Modified on" stamp allowing you to see the creation or last modification time in a smaller image frame. The new One Click Deletes (along with a few other features) improve the workflow immensely. The new Image Merger feature (as a part of the Greyscale Channel Add-on) improves the workflow for editing type. The Documents Panel is more feature-rich too. And it's the first version to do so.

What It Does: This is also important because different camera and lighting setups may require adjusting the brightness of the images. Activating the Hue/Saturation option opens the properties of the basic adjustments. By playing around with the sliders and choose the color you want from the pulldown options, you can fine tune the colors of your image. Selecting whether to process highlights or shadows helps to refine the same effect on both the shadows and highlights and conserve time. A Picture Frame or Slideshow option lets you import your images or add them to the background. An image in the template or already tranferred into a basic document can be replaced with a new image. A Slideshow option can keep your collection neat and organized. **What It Does: The Shadows/Highlights tool gives you the opportunity to tweak the shadows and highlights of your image. The Brightness/Contrast option adjusts the overall contrast of your image while the Color Balance tool gives you fine control over the colors in your image to enhance or remove the brightness from them. The vignette and lighting controls are some of the most useful tools. These options control the brightness and contrast. What It Does: The Center-Mouse Wheel zoom function is a way to zoom your image in and out. The new accelaration feature from version CS6 allows you to zoom in and out while using the scroll wheel. The is smarter than in earlier versions. When holding the scroll wheel down, the software compresses or adds to the magnification of your image, instead of zooming in on the same area. Shooting Raw Mode lets the camera shutter image the brightest possible results and helps to create an accurate image. You choose whether your image will be saved in the RAW or JPEG file format, and the program checks to make sure that the selected format is compatible with the camera you are using. The calibration tool is everything you would expect from a calibration tool. The live camera preview offers you the opportunity to check for any alignment issues or ensure that you address the right problem.** e3d0a04c9c
