With a deeper, more extensive set of undo and history features than Photoshop Elements, the plug-in's cropping tools are tighter. There are new editing features akin to those found in Adobe's other programs, with things like an Events feature, layers, and animation tools all ready to help you with your photo editing.

You can also use regular adjustments to manipulate color and exposure like you did in Photoshop Elements, but now you get tools that make the task easier and faster. Total control over picture details is now easier, too, with the new option to adjust detail in any area of your photo. You also get various brushes that let you apply textures, textures, or special effects or even draw paths. As with other Elements versions, small refinements add up. The recent addition of view modes (Using control or a toolbar button, you can view your images in all-red, all-blue, or any of three intermediate colors) lets you see your photo as if you were viewing it on a print confirmation paper. We are using it since 9 years and its still the best. But the UI needs an update..there is always a problem with performance. Faster apps will be good.

The fact that I can not see my "reviews" anymore is not helping at all Advents show me how I can be so proud to have used Adobe Photoshop.

When I was at university I built up my portfolio of work using this software and I still got an interview through it and my work for my internship was the best result of my application .

I've also built my own website using Photoshop and I realized that it was the best way of making everything come to life, starting with the title and the photos of my guests in a flat style language. So I'd like to say it's the best software to generate good web design.

Cheers!

These facial expression-swapping features are powered by Adobe Sensei AI. Adobe Sensei AI replaces this level of expert judgment with digital brains and helps hone in on the key shifts in facial expressions. For example, when you look at someone and say “she’s cute”—Adobe Sensei AI can, in less than a second, analyze facial expressions and instantly assemble a photo of the subject interacting with the slight alteration you described. Adobe Sensei AI also suggests the best makeup and hairstyle choices for anyone appearing in a photo. Adobe Sensei AI can learn from your photos, too, and create custom training sets. You can even train Photoshop to recognize your work and create an automatic retouching action. And for greater precision, Adobe Sensei AI can suggest all sorts of edits you might want to make to a photo. After you have picked the types of edits you want to apply to a photo, you can use the slider to control the strength of each edit. Adobe Sensei AI analyzes your photo and creates a list of Edit Suggestions, based on the sizes of the 20 most important objects in your photo. Photoshop then adjusts the areas of your image that can be sharpened, smoothed or removed. You can also apply filters to your image using the sliders. This ensures that all of your edits are applied according to your preferences for shine, contrast and color.
