Adobe is also introducing a new online workspace within the desktop version of Photoshop (version 34 and later), which facilitates greater collaboration with others. Users can now view and work with multi-project files from within the Web-based Photoshop Document Service. The new Online Workspace in Photoshop makes it quicker and easier for users to access, share and collaborate on their work more efficiently than ever before. Additionally, the revamped Select command simplifies selection tasks. To make it easier to select an object, the Select command now supports the contextual menu and an enhanced “Smart Object” live preview so the user can quickly and conveniently make decisions about specific parts of an image. Users can also use the keyboard shortcut keys to add or edit selections. The Select tool will more accurately select objects even in complex images, and the new Fill and Replace tools make it easier to add, remove

or replace objects in photographs with a single action. Adobe Suggestive Selection makes it easier to select objects. The tool's support for contextual menus and a redesigned live preview let users select and edit objects directly from the context menu. "Smart Object" selection is now more intelligent and accurate. Objects automatically turn into the correct tool context for filling and replacing the contents of selected parts of an image. Adobe also improved the accuracy of the HSL tools and color balancing for Color Efficiency. The former corrects for warm or cool spots in the overall image. The latter adjusts colors and removes tint to restore a neutral appearance and improve overall color accuracy. In the Find and Replace dialog, search results now include contextual information about the image. Users can instantly see what objects are selectable and the exact content that is available.
