The software, which works on Windows, Mac, and Android and is also found within Acrobat Reader versions 5.1 and newer, offers security features, document management tools, and productivity features such as ruler annotation and layer pool. It also offers features such as text-recognition abilities, an image-web presentation tool, cloud-based collaboration, and image search. Adobe has released Photoshop CC for macOS. The new program comes in both 32-bit and 64-bit editions that both fill voids not met by running the now popular macOS Mojave operating system. The CC's new version includes 20 features and the return of some beloved Photoshop features, like layers. The software will run on any GPU that's capable of running either the discrete AMD Pro 580 or ATI Radeon Pro 450 series. (Wednesday's announcement also said that the CC will work natively on macOS Mojave.)

But the combination of photo-editing prowess and at-your-fingertips capabilities that Photoshop gives you – plus its omnipresent utility and popularity – are why it remains one of the most sought-after tools for serious graphic designers and artists worldwide. You will see the Photoshopped videos start showing up on the web already, with features like the human-eye lens flare technique. What's more, there's also a multi-pass feature, which in this case means you can have the edges of an image fade into the background, much like the way a soap opera adds background music, camera shots, and voiceover shooting on a mid-shot. In either case, it's all thanks to the Lens Blur filters, which artificially blur the edges of an image, making them look more realistic. There are also a range of color controls which can let you regulate and tweak color, composition, and crop settings. **Adobe Sensei: Adobe Sensei is the next-generation photo-editing technology of ADOBE COFé. It transforms the art of digital photography straight from the camera into the studio or on-the-go to help people easily create professional-standard imagery. Sensei wields artificial intelligence to provide unique capabilities using facial recognition to automatically brighten dark blemishes and erases unwanted stray hair. It also estimates the direction of a person's eyes to give photos a sense of motion and can detect a person's gender and age from biometric data in photos for fun selfies.**
