First of all thank you for the good review of Adobes Photoshop. I was eager to see what scores he gives it. I have fewer than 10 months experience with digital photography and I can tell you that nothing, and I mean nothing can replace you know your camera. Every bit of this review is spot on and I can't give you more credit than that. Based on the poor numbers in the first few reviews I felt a bit encouraged. But I knew this guy is a very smart guy and about photography. I didn't feel too confident about getting a very good review. Meanwhile I have recently received a very good review of the D5100 which means that there is not as much good motivation as I thought. If I had gotten this review the week of the camera release I would be ever so tempted to buy it. But now I am only more convinced that I shouldn't do this. If I want a good camera, I buy it. If I care about a very good review, I wait. High scores, even from a good source, are not necessary motivation to buy a camera. In my opinion you got it right and I wish you good luck with your purchases. Regards, Stephen Great review. I definitely agree with your comments about the X-Trans RAW support. It's a travesty. And I hope you agree with my opinion of Leica cameras. They're just an amazing way to photograph. Your review quotes the Diana Premium, too? I love that camera! I'm a 50mm 1.4 "fisheye" man. Ahem. Good luck with your future camera purchases. Excellent review. I agree with most of what you have written. I did have one question: Would you suggest the 50mm f/1.4 or the 85 f/1.4? Do you like the bokeh better on the 85/1.4 but have to use the 50/1.4 for the "skinny" figure? I am really tempted to buy this lens but am concerned about the sharpness and bokeh.

Photoshop elements 1.2.1 introduces mobile support, image resizing and more. RAW image support has also been improved for the Mac version of the software, and the 'Paintball' brush has been replaced with a new airbrush tool. In addition, there is a new 1.0 feature called 'Content-Aware Fill' that automatically fills in unwanted objects in a photo without changing the composition. Support for GIF files has also been added to the software. Adobe's new Photoshop Elements product for Windows 10 is a bit smaller for tablets than the Apple designed product. That's according to Andrew Egan, their product guru for the operating system, as he told Digital Trends. For example, he said images might be three or four times larger than they were on Apple's platform, but in terms of RAM memory, it's only a 30 percent increase. Admittedly, this means a bigger footprint for a smaller device.

However, Adobe has added limited support for VR that will allow users to step inside a 3D model of an object. According to Egan, it will be "a really killer, new feature that lets you walk around a 3D model, turn around it, or explore it—like a 3D Mario game." This will not be available for tablets, but for reference use on the desktop. "This technology allows you to have really rich 3D in 2D apps; it's a baseline computing experience for the future," he explained.
